Answer exactly the question asked. Show work on Questions 2, 4, and 5.
If a derivative does not exist, write DNE. If a function value does not exist, write *undefined*.

1. Questions 1(a)–1(e) refer to Figure B1, the graph of f . (2 each, 10 pts)
The labeled points are on the graph; the dashed line is tangent to the graph at R .

- (a) $\lim_{x \rightarrow 1} \frac{f(x) - f(1)}{x - 1}$ _____
- (b) $\lim_{h \rightarrow 0} [f(1 + h) - f(1)]$ _____
- (c) An equation of the tangent line at R _____
- (d) The labeled point at which $f'(x)$ is greatest _____
- (e) Every labeled point at which $f'(x) > 0$ _____

2. Let $f(x) = 8x - 2x^2$. Evaluate $\frac{f(x) - f(2)}{x - 2}$ for $x = 5$. (4 pts)

3. Answer only. (3 each, 6 pts)

- (a) The limit $\lim_{h \rightarrow 0} \frac{\sqrt{16 + h} - 4}{h}$ equals $f'(c)$ for the function $f(x) = \sqrt{x}$. Find c . _____

- (b) Evaluate $\lim_{x \rightarrow 3} \frac{9 - x^2}{x - 3}$. _____

4. Let $f(x) = \sqrt{x+5}$.

(a) Use the definition below to find $f'(x)$.

(8 pts)

An answer found without the definition earns at most 2 points.

$$f'(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}$$

(b) Find every point (x, y) on the graph of f at which the tangent line has slope $\frac{1}{4}$.

(4 pts)

5. Let $g(x) = x^2 + 7x$. Use the definition below with $c = -4$ to find $g'(-4)$.

(8 pts)

An answer found without the definition earns at most 2 points.

$$g'(c) = \lim_{x \rightarrow c} \frac{g(x) - g(c)}{x - c}$$
